JOSHUA FORTUNATUS

Analytics Engineer & Data Analyst | Analytics Engineering, BI & Causal Inference

Phoenix, AZ | joshuafortunatus@gmail.com | Portfolio | LinkedIn | GitHub

SUMMARY

I'm a dbt Certified Developer and full stack analytics pro with 10+ years in data analytics and BI, including 4+ years owning ad hoc analytics, analytics engineering strategy, and BI platform migration at scale. I build semantic layers and self-serve dashboards that hold up under scrutiny, run causal inference (diff-in-diff, fixed effects) and hypothesis testing to separate real effects from noise, and partner with Product, Marketing, and Engineering to turn ambiguous questions into decisions. My background spans product analytics, growth/activation funnels, and paid marketing/ad tech analytics.

CORE SKILLS

- **BI & Semantic Layer:** Hex, Looker, Tableau, semantic/metrics-layer design, self-serve dashboarding, KPI definition and governance, stakeholder enablement
- **SQL & Data Warehousing:** Advanced SQL (CTEs, window functions, query optimization and cost management), Snowflake, BigQuery, Postgres, ELT/ETL pipeline design
- **Statistics & Causal Inference:** Hypothesis testing, confidence intervals, trend analysis, A/B test design and interpretation, difference-in-differences (Callaway-Sant'Anna), fixed-effects panel models, bootstrap inference
- **Analytics Engineering:** dbt, Fivetran, GitHub, data quality, and metric governance
- **Scripting:** Python (pandas, numpy, polars), applied AI/LLM tooling for analytics workflows
- **Product & Marketing Analytics:** Activation funnel analysis, LaunchDarkly-based experimentation, paid search / paid media
- **Leadership & Stakeholder Management:** Cross-functional partnership with executive, product, and engineering stakeholders; team leadership; data team roadmap ownership

SELECTED EXPERIENCE

Analytics Team Lead / Analytics Engineer / Senior Data Analyst II | Dutchie *Mar 2022 – Present*

- Serve as primary analytics partner to Ad Tech, Customer Experience, Product Support, and Finance stakeholders, translating open-ended, executive- and team-level questions into structured, testable metrics
- Own analytics engineering strategy end-to-end: dbt staging/mart architecture, testing, and metric governance, plus semantic modeling and self-serve dashboard design in Hex, supporting company-wide reporting on large production datasets
- Pitched, secured leadership approval for, and led a full BI platform migration off Looker to Hex — centralizing governed metric definitions, increasing self-serve data democratization, and cutting BI platform costs by ~50%
- Run ad hoc and experimental analyses using advanced SQL and causal inference (difference-in-differences, fixed effects) to quantify product and marketing impact and guide business decisions

Senior Business Data Analyst / Director of Digital Marketing & Analytics | TurboTenant *Sept 2018 – Feb 2022*

- Automated business analytics, marketing analytics, and financial & accounting reporting for a subscription and transactional product business
- Delivered data-driven analyses of growth and activation opportunities across transactional and subscription product lines, directly informing go-to-market strategy
- Built automated analyses and visualizations to surface profitable sub-populations and new user personas for targeting
- Managed $2MM+ in paid advertising spend with a focus on paid search, tying spend to acquisition and activation outcomes

Performance Manager / Strategic Performance Analyst | Enspire for Enterprise *July 2013 – Sept 2018*

- Led a team of 15 digital marketers responsible for a $50MM+ book of business
- Used SQL and Tableau to deliver performance analytics and reporting for enterprise clients across paid search, display, and social channels

SELECTED PROJECTS

- **Dutchie Connect DAG Rebuild —** Rebuilt a drifted dbt DAG around a single "narrow waist" mart owning all sales/inventory definitional logic. Confirmed existing data could support Dutchie Connect's launch without a ground-up rebuild, eliminating fanout and lineage violations across every brand-facing grain.
- **Dutchie Connect Analytics Prototype —** Serving as product data scientist for Dutchie Connect, own the modeling architecture and design the brand analytics product's UX directly in Hex against real data; designs ship straight into engineering's build across the Overview, Brand Funded Deals, and Market Intelligence pages.
- **Pay by Bank AOV Lift —** Applied staggered difference-in-differences (Callaway-Sant'Anna) to isolate a statistically significant, causal lift in order value from a new payments product, controlling for confounded adoption timing and market-wide price compression.
- **Ad Effectiveness & Elasticity —** Used two-way fixed-effects and log-log elasticity models to isolate the causal impact of sponsored ads on GMV and orders across customer tiers, informing ad pricing and inventory decisions.
- **Looker → Hex Migration —** Pitched, secured leadership approval for, and led a company-wide BI migration, centralizing metric definitions and cutting platform costs ~50% while increasing self-serve adoption.
- **dbt Optimization —** Rebuilt the dbt DAG around actual usage, cutting nightly runtime 40% and warehouse compute spend by $50k annually.
- **Support Agent Scorecard —** Automated support agent performance reporting across disparate platforms, eliminating 55+ hours of manual work per month with more trustworthy metrics than native tooling.

CERTIFICATIONS

- **dbt Certified Developer** — dbt Labs, issued Aug 2026 (exp. Aug 2028), Credential ID 192208817

EDUCATION

Boston University — BSBA, Marketing *May 2008*
Dean's List • Capstone Award Winner, 2006
